Safety Information

Important Information

Read these instructions carefully and look at the equipment to become familiar with the device before trying to install, operate, service, or maintain it. The following special messages may appear throughout this documentation or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a “Danger” or “Warning” safety label indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠ DANGER

DANGER indicates a hazardous situation which, if not avoided, **will result in** death or serious injury.

⚠ CAUTION

CAUTION indicates a hazardous situation which, if not avoided, **could result** in minor or moderate injury.

⚠ WARNING

WARNING indicates a hazardous situation which, if not avoided, **could result in** death or serious injury.

NOTICE

NOTICE is used to address practices not related to physical injury.

Please Note

Electrical equipment should be installed, operated, serviced, and maintained only by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this material.

A qualified person is one who has skills and knowledge related to the construction and operation of electrical equipment and its installation and has received safety training to recognize and avoid the hazards involved.

About this book

Document Scope

This guidebook introduces the procedures to replace a unit from “GP3000 Series 7” models” to “GP6000 Series Standard 7” models”.
The recommended substitute models are as follows.

Model in use			Recommended substitutes	
GP3000 Series 7” models	PFXGP3400TAD (AGP3400-T1-D24) *1	→	GP6000 Series Standard 7” models	PFXGP6400TAD
	PFXGP3400TADC (AGP3400-T1-D24-M) *1*2			To be developed as per request

*1: End of Sale on May 29, 2015
*2: This is a coated model of PFXGP3400TAD. As for GP6000 Series, you can request the coated model as Lite Customization. For the details, please contact Customer Service.

Validity Note

This document is valid for GP6000 Series Standard Model.

The characteristics of the products described in this document are intended to match the characteristics that are available on www.pro-face.com. As part of our corporate strategy for constant improvement, we may revise the content over time to enhance clarity and accuracy. If you see a difference between the characteristics in this document and the characteristics on www.pro-face.com, consider www.pro-face.com to contain the latest information.

Information on Non-Inclusive or Insensitive Terminology

As a responsible, inclusive company, Schneider Electric is constantly updating its communications and products that contain non-inclusive or insensitive terminology. However, despite these efforts, our content may still contain terms that are deemed inappropriate by some customers.

Product Related Information

This product has been designed, developed and manufactured for use in industrial or factory automation systems.

• The product is not appropriate for use with aircraft control devices, medical life-support equipment, central trunk data transmission (communication) devices, or nuclear power control devices, due to inherent requirements for extremely high levels of safety and reliability.

• When using the product with transportation vehicles (trains, cars, and ships),disaster and crime prevention devices, safety equipment, or medical devices unrelated to life-support systems, use redundant and/or failsafe system designs to ensure reliability and safety.

If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

⚠⚠DANGER

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Remove all power from the device before removing any covers or elements of the system, and prior to installing or removing any accessories, hardware, or cables.
- Unplug the power cable from both this product and the power supply prior to installing or removing the product.
- Always use a properly rated voltage sensing device to confirm power is off where and when indicated.
- Replace and secure all covers or elements of the system before applying power to this product.
- Use only the specified voltage when operating this product. The DC model is designed to use 12 to 24 Vdc, and the AC model is designed to use 100 to 240 Vac. Always check whether your device is DC or AC powered before applying power.
- When using this product in Class I, Division 2, Groups A, B, C, and D hazardous locations, install this product in an enclosure that prevents the operator from touching the back of this product without the use of tools.

Failure to follow these instructions will result in death or serious injury.

Pro-face™
by Schneider Electric

About this book

Please design a safety circuit external to this product so that the entire system operates safely even if the external power supply or this product fails or malfunctions.

• Interlocks and other circuits designed to interrupt or prevent equipment operation (such as emergency stops, protective circuits, and opposing action circuits) and circuits that prevent machine damage, such as positioning mechanisms, should be constructed external to the product.

• The product stops operation when it detects an abnormality such as a watchdog timer error. If an error occurs in the input/output control area, which cannot be monitored, it may lead to unexpected input/output behavior. Therefore, it is important to configure an external fail-safe circuit or mechanism.

• Problems with the relay or transistor in the output unit may cause the output to remain either in the ON or OFF state. Install an external monitoring circuit for output signals that may cause a serious accident.

Design the circuit so that power is supplied to the external device or load control power supply connected to this product before it starts.

Critical alarm indicators and system functions require independent and redundant protection hardware and/or mechanical interlocks.

Do not create any switches on the touch panel that may cause personal injury, property damage, or compromise the safety of the equipment. Design the system so that controls for important operations are managed by devices other than this product, or by independent hardware switches.

When you cycle power, wait at least 10 seconds after it has been turned off. If this product is restarted too quickly, it may not operate correctly.

In the event the screen cannot be properly read, for example, if the backlight is not functioning, it may be difficult or impossible to identify a function. Functions that may present a hazard if not immediately executed, such as a fuel shut-off, must be provided independently of this product.

⚠WARNING

LOSS OF CONTROL

- The designer of any control scheme must consider the potential failure modes of control paths and, for certain critical control functions, provide a means to achieve a safe state during and after a path failure. Examples of critical control functions are emergency stop and overtravel stop, power outage and restart.
- Separate or redundant control paths must be provided for critical control functions.
- System control paths may include communication links. Consideration must be given to the implications of unanticipated transmission delays or failures of the link.
- Observe all accident prevention regulations and local safety guidelines.
- Each implementation of this product must be individually and thoroughly tested for proper operation before being placed into service.
- The machine control system design must take into account the possibility of the backlight no longer functioning and the operator being unable to control the machine, or making errors in the control of the machine.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

About this book

For additional information, refer to NEMA ICS 1.1 (latest edition), "Safety Guidelines for the Application, Installation, and Maintenance of Solid State Control" and to NEMA ICS 7.1 (latest edition), "Safety Standards for Construction and Guide for Selection, Installation and Operation of Adjustable-Speed Drive Systems" or their equivalent governing your particular location.

⚠WARNING

UNINTENDED EQUIPMENT OPERATION

- The application of this product requires expertise in the design and programming of control systems. Only persons with such expertise should be allowed to program, install, alter, and apply this product.
- Do not use this product as the only means of control for critical system functions such as motor start/stop or power control.
- Do not use this equipment as the only notification device for critical alarms, such as device overheating or overcurrent.
- Use only the software provided with this product. If you use other software, please confirm the operation and safety before use.
- Follow all applicable safety standard, local regulations and directives.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

The following characteristics are specific to the LCD panel and are considered normal behavior:

• LCD screen may show unevenness in the brightness of certain images or may appear different when seen from outside the specified viewing angle. Extended shadows, or crosstalk may also appear on the sides of screen images.

• LCD screen pixels may contain black and white colored spots and color display may seem to have changed.

• When experiencing vibrations within a certain frequency range and vibration acceleration is above what is acceptable, the LCD screen may partially turn white. Once the vibration condition ends, the whitening of the screen is resolved.

• When the same image is displayed on the screen for a long period, an afterimage may appear when the image is changed.

• The panel brightness may decrease when used for a long time in an environment continuously filled with inert gas. To prevent deterioration of panel brightness, regularly ventilate the panel. For more information, please contact customer support.

About this book

⚠WARNING

SERIOUS EYE AND SKIN INJURY

The liquid in the LCD panel contains an irritant:

- Avoid direct skin contact with the liquid.
- Wear gloves when you handle a broken or leaking unit.
- Do not use sharp objects or tools in the vicinity of the LCD panel.
- Handle the LCD panel carefully to prevent puncture, bursting, or cracking of the panel material.
- If the panel is damaged and any liquid comes in contact with your skin, immediately rinse the area with running water for at least 15 minutes. If the liquid gets in your eyes, immediately rinse your eyes with running water for at least 15 minutes and consult a doctor.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

NOTICE

REDUCTION OF SERVICE LIFE OF PANEL

Change the screen image periodically and try not to display the same image for a long period of time.

Failure to follow these instructions can result in equipment damage.

Security Enhancement

Cybersecurity Guideline

Use this product inside a secure industrial automation and control system.
Total protection of components (equipment/devices), systems, organizations, and
networks from cyber attack threats requires multi-layered cyber risk mitigation measures, early detection of incidents, and appropriate response and recovery
plans when incidents occur. For more information about cybersecurity, refer to the Pro-face HMI/IPC Cybersecurity Guide.
https://www.proface.com/en/download/manual/cybersecurity_guide

⚠WARNING

POTENTIAL COMPROMISE OF SYSTEM AVAILABILITY, INTEGRITY, AND CONFIDENTIALITY

- Change default passwords at first use to help prevent unauthorized access to device settings, controls and information.
- Disable unused ports/services and default accounts, where possible, to minimize pathways for malicious attacks.
- Place networked devices behind multiple layers of cyber defenses (such as firewalls, network segmentation, and network intrusion detection and protection).
- Apply the latest updates and hotfixes to your Operating System and software.
- Use cybersecurity best practices (for example: least privilege, separation of duties) to help prevent unauthorized exposure, loss, modification of data and logs, interruption of services, or unintended operation.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Security Seal

This product has a security seal attached, which helps detect unauthorized repairs or modifications to the product. Once the security seal is removed, the product cannot be used again as it would increase the security risk.

⚠WARNING

POTENTIAL COMPROMISE OF SYSTEM AVAILABILITY, INTEGRITY, AND CONFIDENTIALITY

- Do not remove the security seal on the product.
- Do not use products with removed security seals.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Federal Communication Commission Radio Frequency Interference Statement – For USA

FCC Radio Interference Information

This product has been tested and found to comply with the Federal Communications Commission (FCC) limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a commercial, industrial or business environment. This product generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause or be subject to interference with radio communications. To minimize the possibility of electromagnetic interference in your application, observe the following two rules:

- Install and operate this product in such a manner that it does not radiate sufficient electromagnetic energy to cause interference in nearby devices.
- Install and test this product to ensure that the electromagnetic energy generated by nearby devices does not interfere with the operation of this product.

⚠WARNING

ELECTROMAGNETIC / RADIO INTERFERENCE, UNINTENDED EQUIPMENT OPERATION

Check for electromagnetic and radio interference. If interference is detected, take the following actions.

- Increase the distance between this product and the interfering equipment.
- Reorient this product and the interfering equipment.
- Reroute power and communication lines to this product and the interfering equipment.
- Connect this product and the interfering equipment to different power supplies.
- Always use shielded cables when connecting this product to a peripheral device or another computer.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this product.

Public

Hazardous Location Installation - For USA and Canada

General

This product is suitable for use in Class I, Division 2, Groups A, B, C, and D hazardous locations or in non-hazardous locations. Before installing or using this product, confirm that the Hazardous Location certification appears on the product labeling.

NOTE: Some products are not yet rated as suitable for use in hazardous locations. Always use your product in conformance with the product labeling and this manual.

⚠⚠DANGER

HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Remove all power from the device before removing any covers or elements of the system, and prior to installing or removing any accessories, hardware, or cables.
- Unplug the power cable from both this product and the power supply prior to installing or removing the product.
- Always use a properly rated voltage sensing device to confirm power is off where and when indicated.
- Replace and secure all covers or elements of the system before applying power to this product.
- Use only the specified voltage when operating this product. The DC model is designed to use 24 Vdc, and the AC model is designed to use 100 to 240 Vac. Always check whether your device is DC or AC powered before applying power.

Failure to follow these instructions will result in death or serious injury.

⚠WARNING

EXPLOSION HAZARD

- Do not use this product in hazardous environments or locations other than Class I, Division 2, Groups A, B, C, and D.
- Substitution of any components may impair suitability for Class I, Division 2.
- Always confirm the UL 121201 or CSA C22.2 No.213 hazardous location rating of your device before installing or using it in a hazardous location.
- To apply or remove the supply power from this product installed in a Class I, Division 2 hazardous location, you must either: A) Use a switch located outside the hazardous environment, or B) Use a switch certified for Class I, Division 1 operation inside the hazardous area.
- Do not connect or disconnect equipment unless power has been switched off or the area is known to be non-hazardous. This applies to all connections including power, ground, serial, parallel, and network connections.
- Do not install any components, equipment, or accessories manufactured by us or by OEM unless these have also been qualified as suitable for use in Class I, Division 2, Groups A, B, C, and D locations.
- Always use shielded/grounded cables in hazardous locations.
- Use only non-incendive USB devices.
- Do not attempt to install, operate, modify, maintain, service, or otherwise alter this product except as permitted in this manual. Unpermitted actions may impair the suitability of this product for Class I, Division 2 operation.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Make sure that this product is properly rated for the location. If the intended location does not presently have a Class, Division and Group rating, then users should consult the appropriate authorities having jurisdiction in order to determine the correct rating for that hazardous location.

Hazardous Location Installation - For USA and Canada

Operation and Maintenance

The systems have been designed for compliance with relevant spark ignition tests.

⚠WARNING

EXPLOSION HAZARD

In addition to the other instructions in this manual, observe the following rules when installing this product in a hazardous location:

- Wire the equipment in accordance with the National Electrical Code article 501.10 (B) for Class I, Division 2 hazardous locations.
- Install this product in an enclosure suitable for the specific application.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

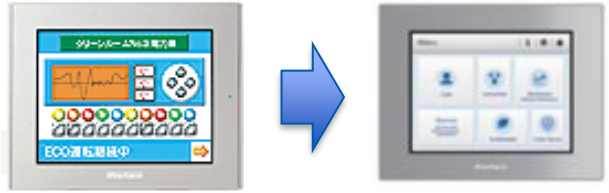
1. Summary

When replacing from GP3000 series 7” models (PFXGP3400TAD) to GP6000 Series Standard 7” models (PFXGP6400TAD), please note the following points.

- External dimensions: The panel cut dimensions are the same, but the external dimensions are different. It is necessary to check the dimensions of the HMI installation location.

PFXGP3400TAD	W215 x H170 x D60 mm	PFXGP6400TAD	W218 x H173 x D60 mm



GP3000 Series　　GP6000 Series

- Serial Interface: The serial interface specification is different between GP3000 and GP6000. For details, refer to “2-6. Other Important Notes on Hardware”.
- Auxiliary Input/Output I/F: External Reset Input and 3 Outputs (RUN Output, System Alarm Output, and External Buzzer Output) used with GP3000 cannot be used with GP6000 Standard models.
- Sound Output I/F: The sound out function used with GP3000 cannot be used with GP6000 Standard models.
- Expansion Unit: GP6000 Standard models doesn’t have this interface. The expansion unit used with GP3000 cannot be used with GP6000 Standard models.
- GP6000 Series Standard models is supported by GP-Pro EX V5.00.000 or later. For information about the software part, refer to GP-Pro EX Reference Manual.
- GP6000 Series Standard models is equipped with System Settings separate from offline mode. In the System Settings, you can configure the hardware settings. For information about the System Settings, refer to GP6000 Series Hardware Manual.

2-5. Option compatibility – Serial Interface

Product Name	Product Number (Pro-face CR)		Description	Compatibility
	PFXGP3400TAD	PFXGP6400TAD		
Multi-Link Cable (5m)	PFXZC3CBML1 (CA3-CBLMLT-01)		Connects a host controller to this product for multi-link (n:1) communication *End of sale	✔
	-	PFXZCBCBML1		NEW
RS-232C 9-pin/25-pin Conversion Cable (20cm)	PFXZC3CBCVR21 (CA3-CBLCBT232-01)		Cable for converting a D-Sub 9-pin plug to a D-Sub 25-pin socket	✔
RS-422C 9-pin/25-pin Conversion Cable (20cm)	PFXZC3CBCVR41 (CA3-CBLCBT422-01)	-	Cable for converting a D-Sub 9-pin plug to a D-Sub 25-pin socket * End of sale	-
	-	PFXZCBCBCVR41	Cable for converting a D-Sub 9-pin plug to a D-Sub 25-pin socket	NEW
2 Port Adapter Cable (5m)	PFXZC3CBMD1 (CA3-MDCB11)	-	Connects Mitsubishi PLC to this product using 2 port adapter II (RS-422) *End of sale	No
Mitsubishi PLC A, QnA, FX Series 2 Port Adapter II	PFXZGPADMD1 (GP070-MD11)	-	Allows simultaneous use of this product and a Mitsubishi PLC A, QnA, FX Series peripheral device. *End of sale	No
COM Port Conversion Adapter	PFXZC3ADCM1 (CA3-ADPCOM-01)		Connects optional RS-422 communication items to serial interface.	✔
RS-422 Terminal Block Conversion Adapter	-	PFXZCBADTM1	Connects output from a serial interface (D-sub 9 pin plug) directly to an RS-422 terminal block.	NEW
Terminal Block Conversion Adapter	PFXZC3ADR41 (CA3-ADPTRM-01)		Connects output from a serial interface (D-sub 9 pin socket) directly to an RS-422 terminal block.	✔
RS-232C Isolation Unit	PFXZC3ADISR21 (CA3-ISO232-01)		Connects a host controller to this product and provides isolation (RS-232C and RS-422 are switchable).	✔
On-line adapter	PFXZC4ADCM1 (CA4-ADPONL-01)	-	Connects a host controller to this product with provides isolation.(RS-422 and RS-485 are switchable.)	-
Siemens COM Port Conversion Adapter	PFXZC3ADSE1 (CA3-ADPSEI-01)	-	Terminal adapter in the case of performing RS-422/RS-485 communication at COM2 port.	-
RS-485 Isolation Unit	PFXZC3ADISR81 (CA3-ISO485-01)	-	Connects Siemens PLCs to the AGP. (for RS-485 communication)	-

NOTE: Products may be changed or discontinued without notice. Please check our website for the latest information.

2-5. Option compatibility – USB Interface

Product Name	Product Number (Pro-face CR)		Description	Compatibility
	PFXGP3400TAD	PFXGP6400TAD		
USB Transfer Cable (2m)	PFXZC3CBUSA1 (CA3-USBCB-01)	-	Cable for transferring screen data between a PC (USB Type A) and this product (USB Type A)	N/A of USB A to A screen transfer
USB Transfer Cable	-	PFXZUSCBMB2	Cable for transferring screen data from a PC (USB Type A) to this product (USB micro-B)	NEW
USB Cable (5m)	PFXZC0CBUS1 (FP-US00)		Connects a USB printer (Type B)	✔*1
USB Front Cable (1m)	PFXZC5CBUBEX1 (CA5-USBEXT-01)		Extension cable that attaches USB interface (Type A) to front panel	✔
USB (micro-B) Front Cable	-	PFXZCIEXMB2	Extension cable that attaches USB interface (micro-B) to front panel	NEW
USB Clamp Type A (1 port)	-	PFXZCBCLUSA1	Clamp to prevent disconnection of USB cable (USB/A, 1 port, 5 clamps/set)	NEW
USB-Serial (RS-232C) Conversion Cable (0.5m)	PFXZC6CBCVUSR21 (CA6-USB232-01)		Cable for converting a USB interface into a serial interface (RS-232C)	✔*1
USB-Serial (RS-422/485) Conversion Adapter	-	PFXZCBCBCVUSR41	Adapter for connecting this product (USB Type A) to an external device (RS-422/RS-485)	NEW*1
USB Clamp mini-B (1 port)	-	PFXZC9USCLMB1	Clamp to prevent disconnection of USB cable (USB/mini-B, 1 port, 5 clamps/set)	NEW
EZ Tower Light tube mounting fixing plate	PFXZCETWHA1 *1	PFXZCETWHA1	USB Connection Type Monolithic EZ Tower Light tube mounting with fixing plate 3 tiers, Ø60, lighting and flashing with a buzzer	✔*1
EZ Tower Light with base mounting	PFXZCETWW1 *1	PFXZCETWW1	USB Connection Type Monolithic EZ Tower with base mounting 3 tiers, Ø60, lighting and flashing with a buzzer	✔*1
EZ Illuminated Switch	-	PFXZCCEUSG1	A unit of 5 illuminated switches with multiple color LED easily connected with this product unit via USB	NEW*1

*1 Plan to support by future version of GP-Pro EX.
NOTE: Products may be changed or discontinued without notice. Please check our website for the latest information.

2-6. Other Important Notes on Hardware

- About Serial Interface
  - The Serial Interface specifications (such as pin assignment and the shape of plug/socket) of GP6000 are different from GP3000. For the details, please refer to GP6000 Series Hardware Manual.
  - The RS-232C device that was connected via COM1 on GP3000 will be connected via COM1 on GP6000. (The same cable connection can be used.)
  - The RS-422/485 device that was connected via COM1 on GP3000 will be connected via COM2 on GP6000. (The same cable connection can be used.) Before GP6000 is connected, be sure to change the port setting to "COM2" in "Device/PLC Settings“ on GP-Pro EX. Also, please check the communication settings again with "GP-Pro-EX Device/PLC Connection Manual“ just in case.
  - If you have configured GP3000 to connect both COM1 and COM2 to the RS-422/485 devices, you will only be able to connect them via COM2 when replacing to GP6000.

2-6. Other Important Notes on Hardware

- Do not expose the hardware to direct sunlight. Recommend to use the option item “UV Protection Sheet” to protect the display from ultraviolet light.
- This product is not designed for outdoor use. UL certification obtained is for indoor use only.
- Do not turn on the hardware if condensation has occurred inside the device.
- The panel brightness may decrease when used for a long time in an environment continuously filled with inert gas. Please ventilate the control panel periodically.

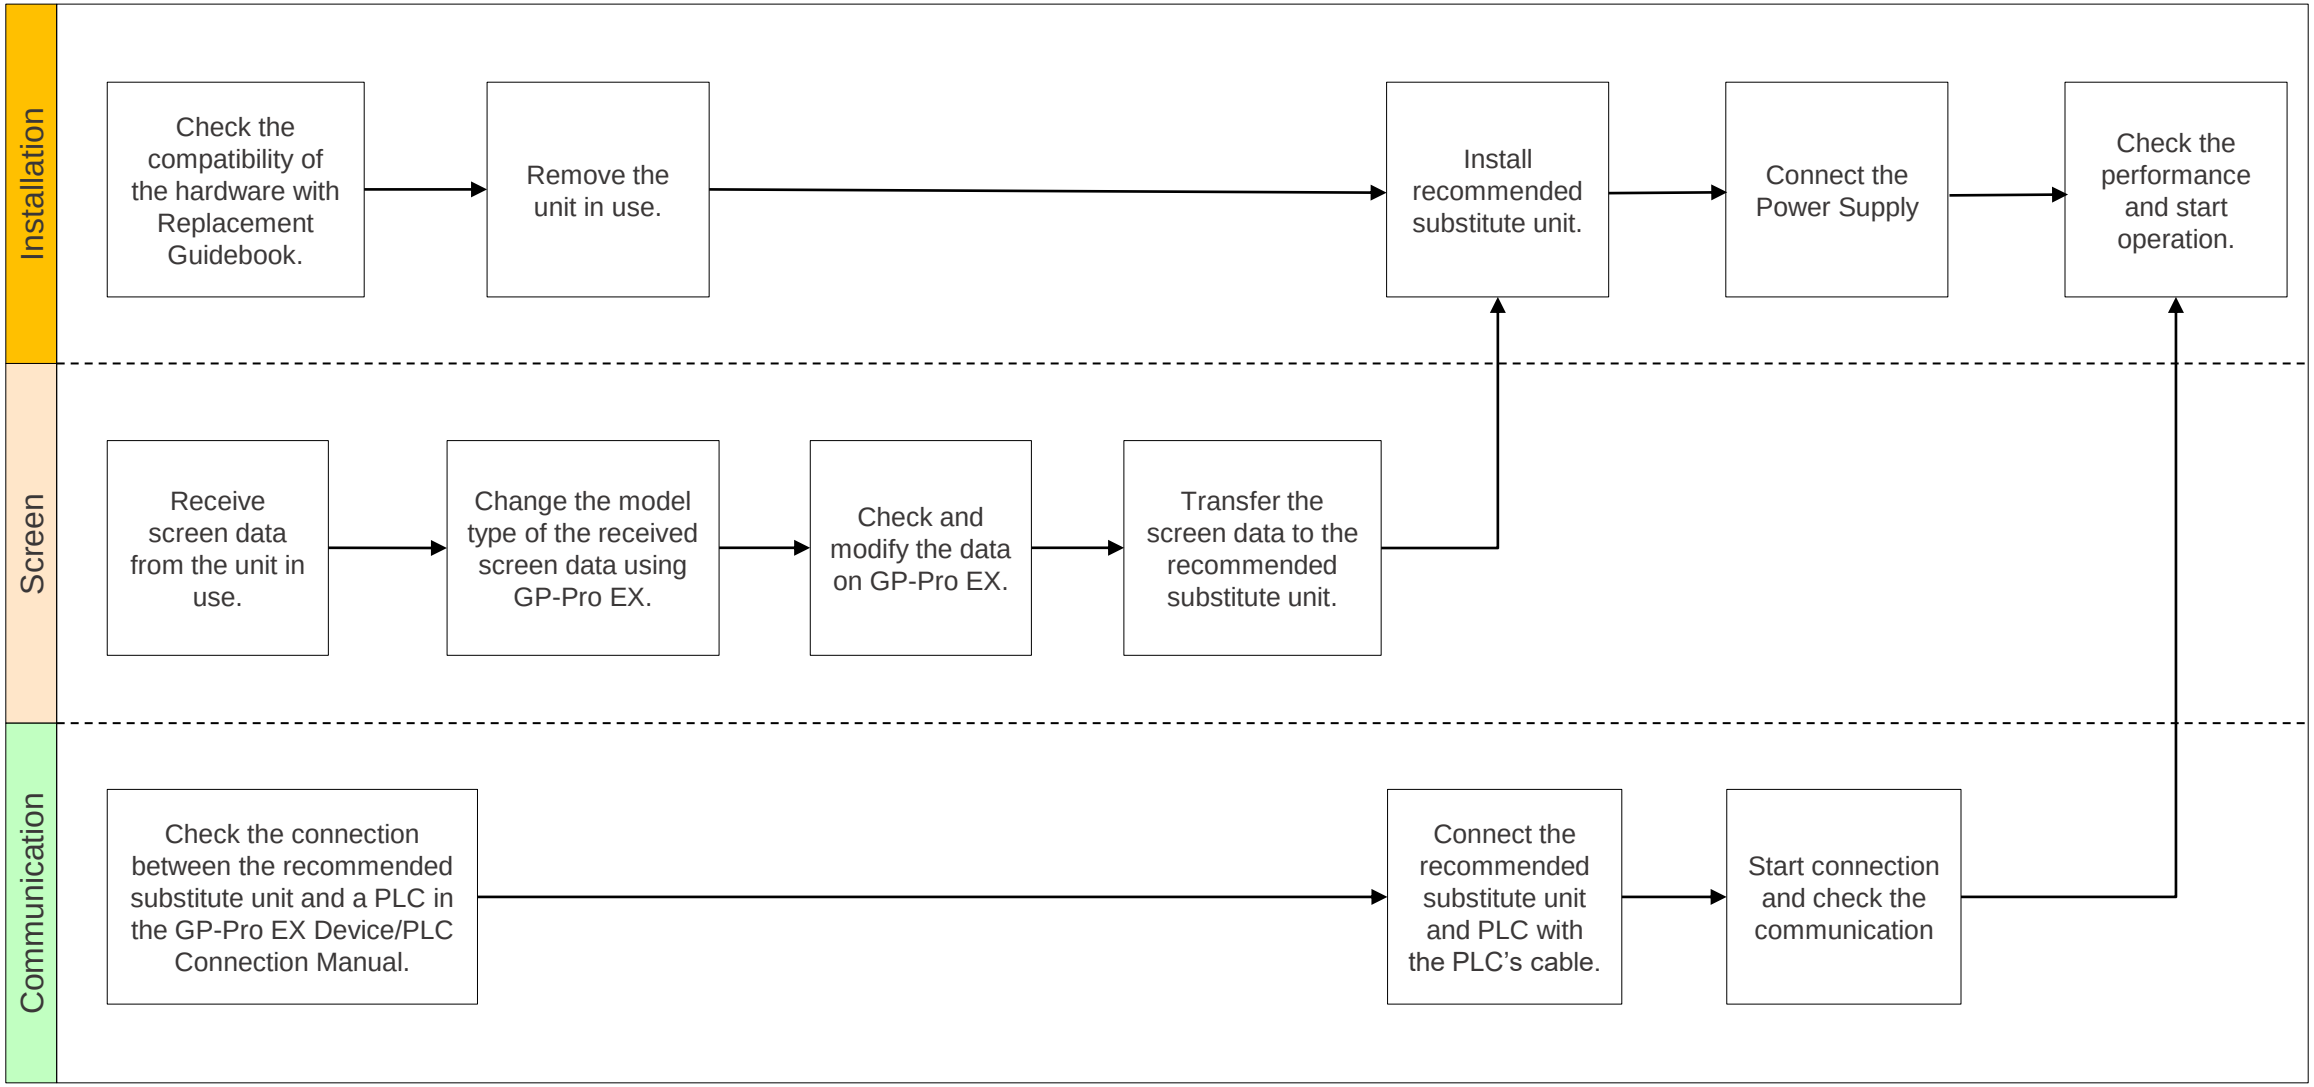
3-1. Replacement Procedure – Workflow



© 2025 Pro-face. All Rights Reserved. |

Public

3-1. Replacement Procedure – Preparation

Requirements for receiving screen data from the unit in use *1	PC in which GP-Pro EX Transfer Tool is installed. *2
	Transfer Cable (the followings can be used) USB transfer cable: PFXZC3CBUSA1 (Type A – Type A) *It's also possible to send/receive a screen via CF card, USB storage device or Ethernet.
Requirements for converting screen data of the unit in use and transferring the converted data to Recommended substitute unit	PC with GP-Pro EX installed GP6000 Series supported version: V5.00.000 or later
	Transfer Cable (the followings can be used) USB transfer cable: PFXZUSCBMB2 (Type A – Type micro-B) or commercial type *It's also possible to send/receive a screen via Ethernet.

*1: This step is required if screen data is saved only in the HMI unit, not in any other device.
If you already have the screen data backup, please go to "3-1. Replacement Procedure – Change model to recommended substitute unit (GP-Pro EX)".

*2: Please use the same or later version of the software used when creating screens on the old model. If you don't know the software version, we recommend that you use the latest one. You can download the latest transfer tool from our website.

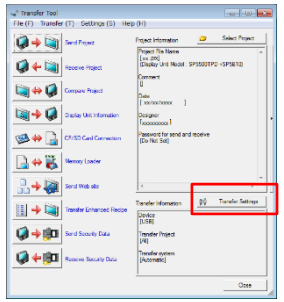
3-1. Replacement Procedure – Receive Screen data from the model in use (GP-Pro EX)

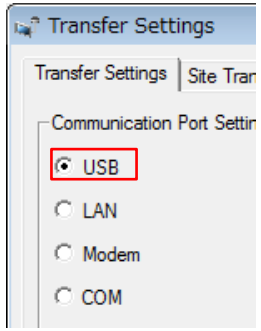
In this section, we will introduce how to receive screen data with a USB transfer cable as an example. If you have the backup of screen data, this step is not necessary. Please go to the next section.

1. Connect your PC and the model in use with a USB transfer cable. If the driver of the cable has not been installed on your PC yet, a dialog box will appear. Please follow the instructions.

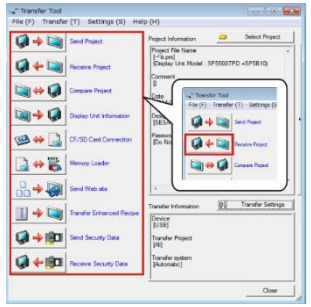
2. Start the Transfer Tool of GP-Pro EX.



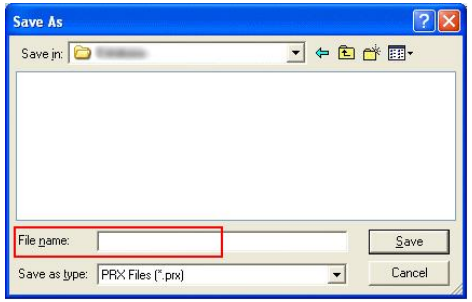
3. Make sure that the [Device] in the “Transfer Settings Information” is set to [USB]. If not, click the [Transfer Setting] button to open the “Transfer Setting” dialog box. Select [USB] in the Communication Port Settings field and click [OK].



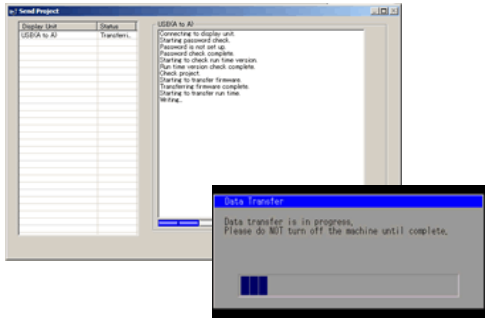
4. Start GP-Pro EX Transfer Tool and click the [Receive Project] button.



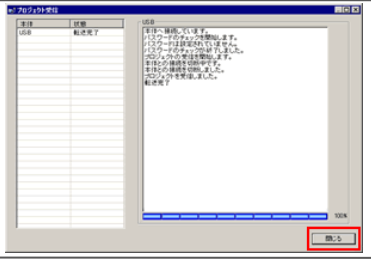
5. Click [Receive Project], and the following dialog box will appear. Specify a place to save the received data in and a project file name, and then click [Save] to start transfer.



6. The following dialog box appears during transfer, and you can check the communication status. (The display unit enters the Transferring mode and communication with the device such as a PLC is terminated.)



7. When transfer is completed, the status displayed in the dialog box will change from [Transferring] to [Complete Transfer]. Click [Close] to close the dialog box.

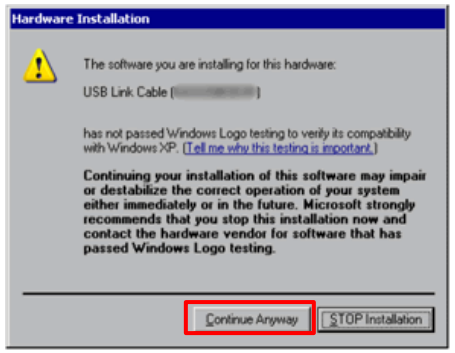


8. Close the Transfer Tool.

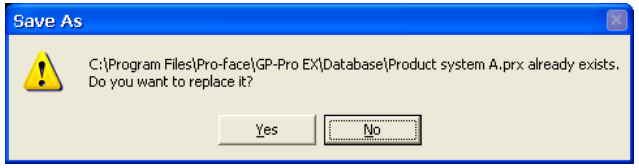
3-1. Replacement Procedure – Receive Screen data from the model in use (GP-Pro EX)

NOTES

- The “Hardware Installation” dialog box as shown on the right may appear during installing the USB driver depending on the security level of Windows®. Click [Continue Anyway] to start installing the driver. When installation is completed, click [Finish].

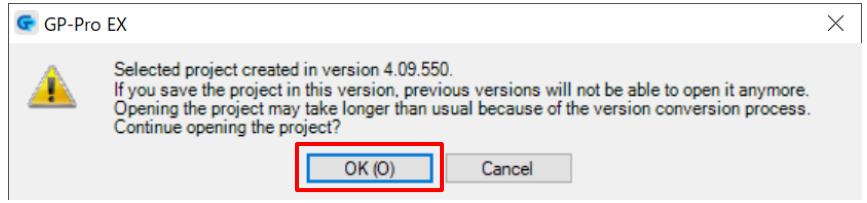


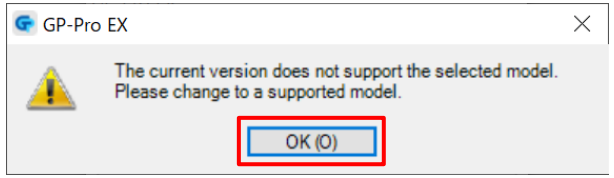
- When the file already exists, a window will appear asking if you want to overwrite the file.

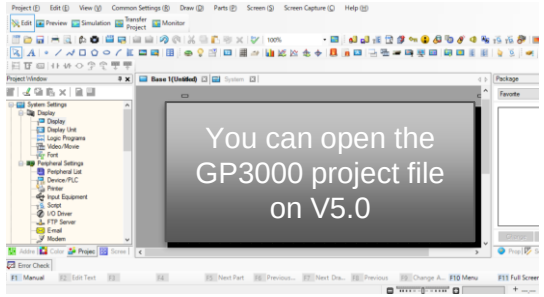


- When receiving a project file that uses SD card/USB memory data such as Recipe Function (CSV data), the following dialog box will appear during the transfer. Please specify where to save the data. Click [OK] to return to the [Receive Project] dialog box and complete the transfer.

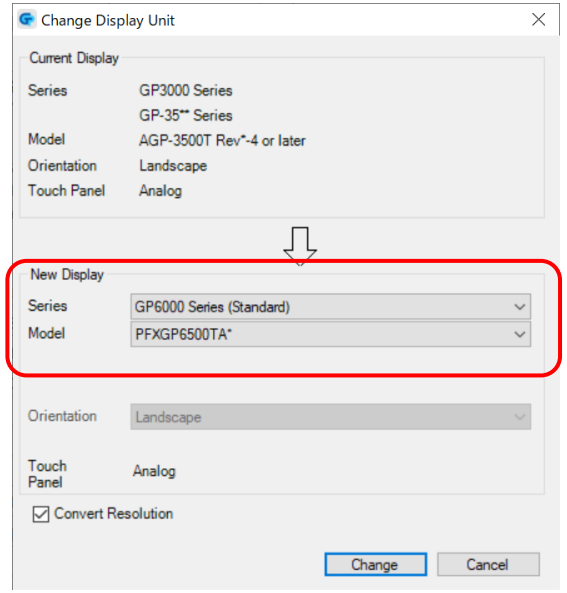
- GP3000 Series is not supported by GP-Pro EX V5.0 or later. Therefore, when you open the received data from GP3000 Series on GP-Pro EX V5.0 or later, you’ll see the error message like below.





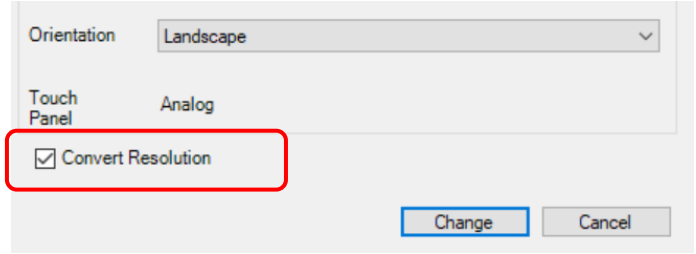


3-1. Replacement Procedure – Change model to recommended substitute unit (GP-Pro EX)



Change the Display unit from GP3000 Series to GP6000 Series (Standard).
The display can be changed from the menu bar “Project” → “System Settings” → “Display” → “Change Display” in GP-Pro EX.

If you check on [Convert Resolution] when changing the Display Unit type (as shown below), you can adjust both size and location of the part and the text relative to the display resolution automatically. But still, you may need to adjust them manually. Please pay attention to the following points.



- A function that requires absolute coordinates. Please adjust the settings manually.
  - **Global window**
  - **Position Animation**
- Due to font size and resolution restrictions, manual changes may be required. Please resize them if needed
  - **Font:** In the case of using Standard font, the size will be smaller. You can improve by using Stroke font or Image font.
  - **Objects**
  - **Parts**
  - **Images**
  - **Alarm parts**
- Position may differ from the original project. Please check the coordinate of the window and adjust if needed.
  - **Window display**

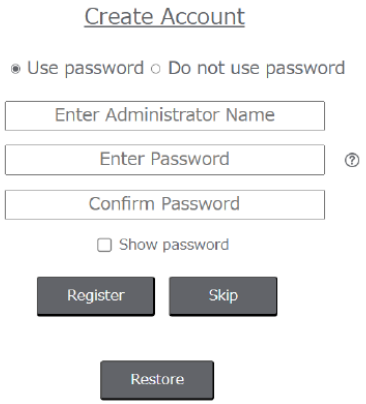
3-1. Replacement Procedure – Transfer screen data to recommended substitute unit (GP-Pro EX)

After turning on the product for the first time, perform the system setup. For the detailed procedure, refer to **System Settings** section in GP6000 Series Hardware Manual.

1. Turn on the power of the product.

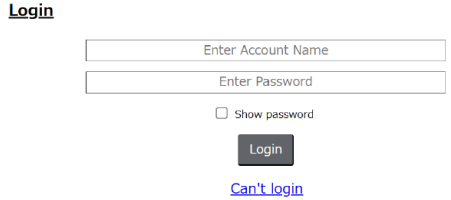
2. The Create Account screen is displayed. Create an administrator user account for the System Settings. Enter the username and password, then touch the Register button.

NOTE:
- Passwords should be at least 8 digits long and include at least one uppercase letter, one lowercase letter, one number, and one special character.
- Although you can operate the product without using password authentication, we recommend setting a password to keep the product secure.

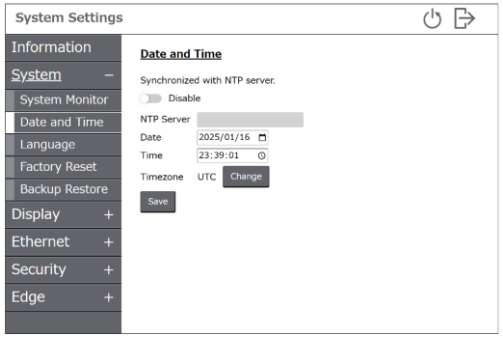


3. The Welcome screen is displayed. Touch System Settings.

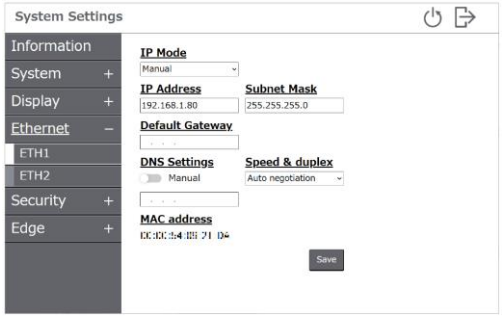
4. The Login screen is displayed. Enter the username and the password set earlier, then touch the Login button.



5. The System Settings menu screen is displayed. Select System > Date and Time to set the clock, then touch the Save button.



6. From the menu, select Ethernet. Change the network settings as required and touch the Save button.



7. Change other settings as required. For information on system settings functions, refer to GP6000 Series Hardware Manual.

8. Touch the logout icon at the top right of the screen. The Welcome screen is displayed.

(continue to the next page)

3-1. Replacement Procedure – Transfer screen data to recommended substitute unit (GP-Pro EX)

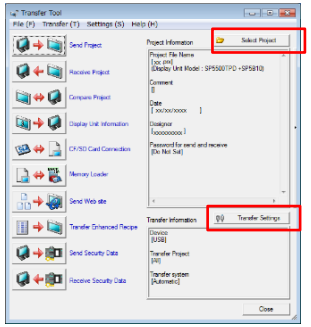
In this section, we will introduce how to transfer screen data via Ethernet (LAN) as an example.

1. After the initial setup on GP6000 (in the previous page), Welcome screen is displayed.

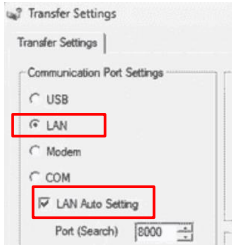
2. Connect the LAN cable to the display unit to establish the network with the PC installed with GP-Pro EX. (Set up the same network IP address on your PC.)

3. On the GP-Pro EX status bar, click the [Transfer Project] icon and launch the Transfer Tool. Confirm the project details in [Project Information]. To transfer a different project, click the [Select Project] button and choose the appropriate project.

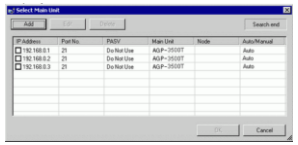
   Click [Transfer Setting] to display the [Transfer Tool] dialog box.



4. Click Ensure that [Communication Port Settings] is set to [LAN]. Select the [LAN Auto Setting] check box and click [OK].



5. Click [Send Project].
   The [Select Display Unit] dialog box displays the IP addresses of the display units available on the network.

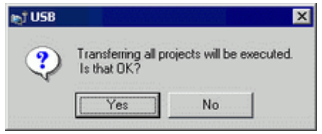


6. Select each IP address of the display unit to which you want to transfer and click [OK]. When multiple IP addresses are checked, the project is sent to multiple display units at once.

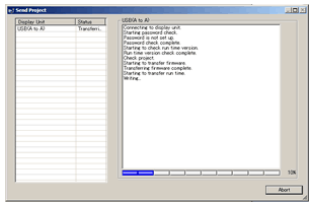
7. Set the connection key and click [OK].

   NOTE: If you forget the connection key, you will not be able to connect to the display unit. For more information about connection key, refer to GP-Pro EX reference manual (34.14.4 How the Connection Key Works).

8. When the following dialog box appears, click [Yes].



9. The transfer begins. The following dialog box appears during transfer, and you can check the communication status. (The display unit changes to Transferring mode and communication with the device/PLC is suspended.)



10. When transfer is completed, the state of the dialog box changes from [Transferring] to [Transfer Complete]. Click [Close].

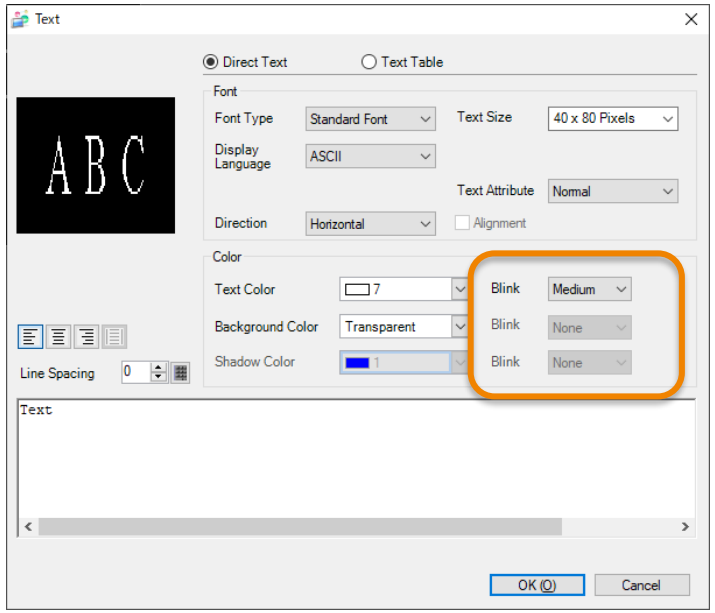
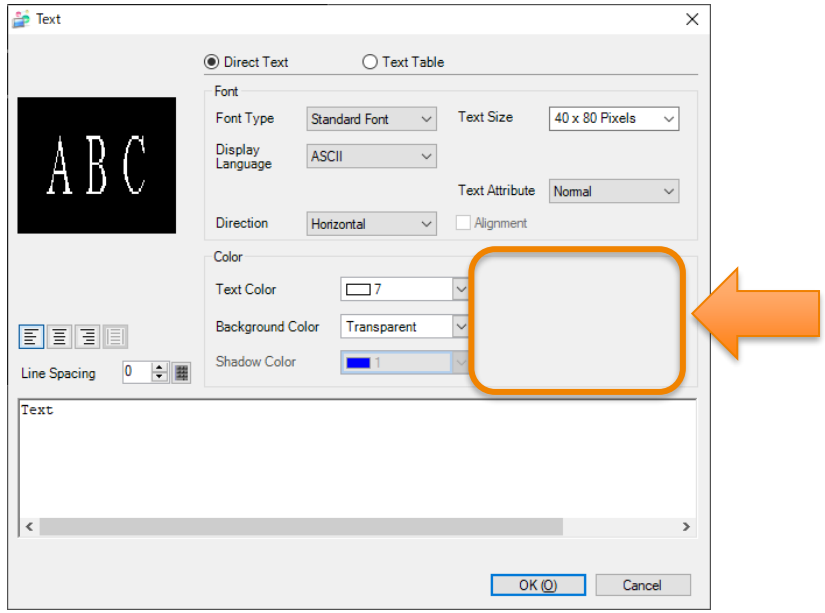
3-3. Other Important Notes on Software

- About Blink function
  - GP6000 Series do not support Blink function. Therefore, if you use the blink settings in GP3000 Series, the settings will be cancelled after changing the display to GP6000 Series in GP-Pro EX.

GP3000 Series



After converting the project to GP6000 Series



NOTE: We have a workaround to add blink functions to some of the parts/texts on GP6000 display by using the functions of the configuration software, GP-Pro EX. Refer to the following FAQ for the setting procedures.
https:/www.proface.com/en/support/faq/FAQ000268649

Pro-face™
by Schneider Electric

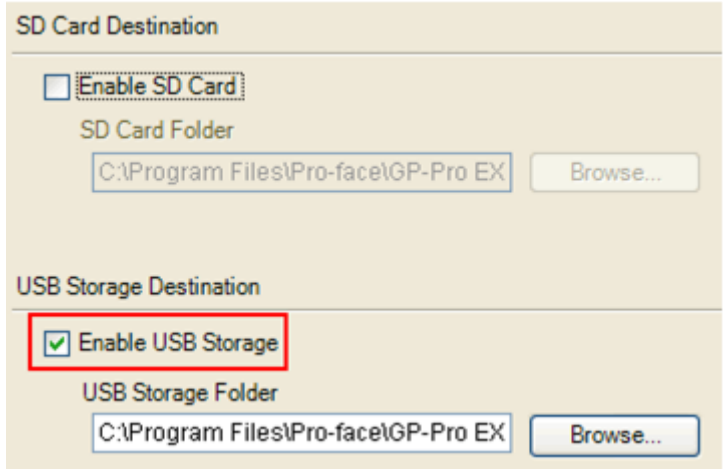
3-3. Other Important Notes on Software

- Changing the setting of the external media to use
  - If a CF card is used for GP3000 Series, after the display unit type of the project file is changed to GP6000 Series, “a CF card” is automatically replaced with “a SD card” for the external media setting.

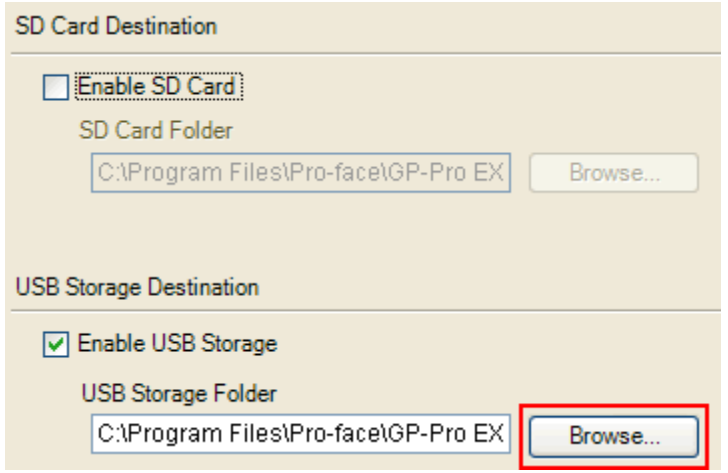
  - To use a USB memory storage instead of SD card, change the settings on GP-Pro EX according to the following procedure.

< Procedure >

1) Click [Project] → [Information] → [Destination Folder]
2) Uncheck “Enable SD Card” and check “Enable USB Storage”.



3) Click the [Browse] button and specify a destination folder.



4) Click [OK] to confirm the setting.

5) Click [Project]->[Save] to save changes.

6) Check each function that uses the CF Card and replace the setting with [USB Storage].
