

The 3<sup>rd</sup> Edition May 2025 SE01-Guide-GP3300DIOtoSTC6300TA-EN-03

<sup>\*</sup>Products may be changed or discontinued without notice. Please check our website for the latest information.

# **Update History**

Date	Edition	Updated Slide	Description
2024/03/08	1 <sup>st</sup>	-	Newly created
2024/08/23	2 <sup>nd</sup>	44	Added information of the workarounds for Blink function on STC6000 Series
2025/03/03	3 <sup>rd</sup>	13 14 & 19 18 39	Correction: Backup memory type corrected from NVRAM to FLASH EPROM CANopen communication is not supported by STC6000 Updated the supported standards page: certified by EU RO MR (Marine certification) and CCC-Ex Newly supported feature: XY Graph (with GP-Pro EX Ver.5.00.000 or later)

# **Legal Information**

The Pro-face brand and any trademarks of Schneider Electric SE and its subsidiaries referred to in this guide are the property of Schneider Electric SE or its subsidiaries. All other brands may be trademarks of their respective owners.

This guide and its content are protected under applicable copyright laws and furnished for informational use only. No part of this guide may be reproduced or transmitted in any form or by any means (electronic, mechanical, photocopying, recording, or otherwise), for any purpose, without the prior written permission of Schneider Electric.

Schneider Electric does not grant any right or license for commercial use of the guide or its content, except for a non-exclusive and personal license to consult it on an "as is" basis. Schneider Electric products and equipment should be installed, operated, serviced, and maintained only by qualified personnel.

As standards, specifications, and designs change from time to time, information contained in this guide may be subject to change without notice.

To the extent permitted by applicable law, no responsibility or liability is assumed by Schneider Electric and its subsidiaries for any errors or omissions in the informational content of this material or consequences arising out of or resulting from the use of the information contained herein.

As part of a group of responsible, inclusive companies, we are updating our communications that contain non-inclusive terminology. Until we complete this process, however, our content may still contain standardized industry terms that may be deemed inappropriate by our customers.

# Safety Information

### **Important Information**

Read these instructions carefully and look at the equipment to become familiar with the device before trying to install, operate, service, or maintain it. The following special messages may appear throughout this documentation or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a "Danger" or "Warning" safety label indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

### **A** DANGER

**DANGER** indicates a hazardous situation which, if not avoided, will result in death or serious injury.

### **A** CAUTION

**CAUTION** indicates a hazardous situation which, if not avoided, **could result** in minor or moderate injury.

### WARNING

**WARNING** indicates a hazardous situation which, if not avoided, **could result in** death or serious injury.

### **NOTICE**

NOTICE is used to address practices not related to physical injury.

#### **Please Note**

Electrical equipment should be installed, operated, serviced, and maintained only by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this material.

A qualified person is one who has skills and knowledge related to the construction and operation of electrical equipment and its installation and has received safety training to recognize and avoid the hazards involved.

### **Document Scope**

This guidebook introduces the procedures to replace a unit from "GP3300T/S/L Control Class (DIO Type)" to "STC6000 Series". The recommended substitute models are as follows.

	Model	in use		Recommended substitutes		
GP-3300T/S/L Control Class	GP-3300T	PFXGP3300TADDK (AGP3300-T1-D24-D81K)	$\rightarrow$	STC-6300TA (Digital Output Sink Type)	PFXSTC6300TADDKE	
DIO Type	PFXGP3300TADD	PFXGP3300TADDC (AGP3300-T1-D24-D81C)	$\rightarrow$	STC-6300TA (Digital Output Source Type)	PFXSTC6300TADDCE	
	GP-3300S	PFXGP3300SADDK (AGP3300-S1-D24-D81K)	$\rightarrow$	STC-6300TA (Digital Output Sink Type)	PFXSTC6300TADDKE	
		PFXGP3300SADDC (AGP3300-S1-D24-D81C)	$\rightarrow$	STC-6300TA (Digital Output Source Type)	PFXSTC6300TADDCE	
	GP-3300L	PFXGP3300LADDK (AGP3300-L1-D24-D81K)	$\rightarrow$	STC-6300TA (Digital Output Sink Type)	PFXSTC6300TADDKE	
		PFXGP3300LADDC (AGP3300-L1-D24-D81C)	$\rightarrow$	STC-6300TA (Digital Output Source Type)	PFXSTC6300TADDCE	

### **Validity Note**

This documentation is valid for this product.

The technical characteristics of the device(s) described in the present manual also appear online at www.pro-face.com.

The characteristics that are described in the present document should be the same as those characteristics that appear online. In line with our policy of constant improvement, we may revise content over time to improve clarity and accuracy. If you see a difference between the document and online information, use the online information as your reference.

### **Registered Trademarks**

Product names used in this manual may be the registered trademarks owned by the respective proprietors.

#### **Related Documents**

You can download the manuals related to this product, such as the software manual, from our website. <a href="https://www.proface.com/en/download/search">https://www.proface.com/en/download/search</a>

#### **Product Related Information**

If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

### **AADANGER**

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Remove all power from the device before removing any covers or elements of the system, and prior to installing or removing any accessories, hardware, or cables.
- Unplug the power cable from both this product and the power supply prior to installing or removing the product.
- Always use a properly rated voltage sensing device to confirm power is off where and when indicated.
- Replace and secure all covers or elements of the system before applying power to this product.
- Use only the specified voltage when operating this product. This product is designed to use 24 Vdc. Always check whether your device is DC powered before applying power.
- When using this product in Class I, Division 2, Groups A, B, C, and D hazardous locations, install this product in an enclosure that prevents the operator from touching the back of this product without the use of tools.

Failure to follow these instructions will result in death or serious injury.

Critical alarm indicators and system functions require independent and redundant protection hardware and/or mechanical interlocks.

When you cycle power, wait at least 10 seconds after it has been turned off. If this product is restarted too quickly, it may not operate correctly.

In the event the screen cannot be properly read, for example, if the backlight is not functioning, it may be difficult or impossible to identify a function. Functions that may present a hazard if not immediately executed, such as a fuel shut-off, must be provided independently of this product. The machine's control system design must take into account the possibility of the backlight no longer functioning and the operator being unable to control the machine or making mistakes in the control of the machine.

#### **AWARNING**

#### LOSS OF CONTROL

- The designer of any control scheme must consider the potential failure modes of control paths and, for certain critical control functions, provide a means to achieve a safe state during and after a path failure. Examples of critical control functions are emergency stop and overtravel stop, power outage and restart.
- Separate or redundant control paths must be provided for critical control functions.
- System control paths may include communication links. Consideration must be given to the implications of unanticipated transmission delays or failures of the link.
- · Observe all accident prevention regulations and local safety guidelines.
- Each implementation of this product must be individually and thoroughly tested for proper operation before being placed into service.
- The machine control system design must take into account the possibility of the backlight no longer functioning and the operator being unable to control the machine, or making errors in the control of the machine.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

For additional information, refer to NEMA ICS 1.1 (latest edition), "Safety Guidelines for the Application, Installation, and Maintenance of Solid State Control" and to NEMA ICS 7.1 (latest edition), "Safety Standards for Construction and Guide for Selection, Installation and Operation of Adjustable-Speed Drive Systems" or their equivalent governing your particular location.

#### **AWARNING**

#### UNINTENDED EQUIPMENT OPERATION

- The application of this product requires expertise in the design and programming of control systems. Only persons with such expertise should be allowed to program, install, alter, and apply this product.
- · Follow all applicable safety standard, local regulations and directives.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

### **AWARNING**

#### UNINTENDED EQUIPMENT OPERATION

- Do not use this product as the only means of control for critical system functions such as motor start/stop or power control.
- Do not use this equipment as the only notification device for critical alarms, such as device overheating or overcurrent.
- Use only the software provided with this product. If you use other software, please confirm the operation and safety before use.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

The following characteristics are specific to the LCD panel and are considered normal behavior:

- LCD screen may show unevenness in the brightness of certain images or may appear different when seen from outside the specified viewing angle. Extended shadows, or crosstalk may also appear on the sides of screen images.
- LCD screen pixels may contain black and white colored spots and color display may seem to have changed.
- When experiencing vibrations within a certain frequency range and vibration acceleration is above what is acceptable, the LCD screen may partially turn white. Once the vibration condition ends, the whitening of the screen is resolved.
- When the same image is displayed on the screen for a long period, an afterimage may appear when the image is changed.
- The panel brightness may decrease when used for a long time in an environment continuously filled with inert gas. To prevent deterioration of panel brightness, regularly ventilate the panel. For more information, please contact customer support. https://www.pro-face.com/trans/en/manual/1015.html

### **AWARNING**

#### SERIOUS EYE AND SKIN INJURY

The liquid in the LCD panel contains an irritant:

- Avoid direct skin contact with the liquid.
- · Wear gloves when you handle a broken or leaking unit.
- Do not use sharp objects or tools in the vicinity of the LCD panel.
- Handle the LCD panel carefully to prevent puncture, bursting, or cracking of the panel material.
- If the panel is damaged and any liquid comes in contact with your skin, immediately rinse the area with running water for at least 15 minutes. If the liquid gets in your eyes, immediately rinse your eyes with running water for at least 15 minutes and consult a doctor.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

### NOTICE

#### REDUCTION OF SERVICE LIFE OF PANEL

Change the screen image periodically and try not to display the same image for a long period of time.

Failure to follow these instructions can result in equipment damage.

# Cybersecurity

### **Cybersecurity Guideline**

Use this product inside a secure industrial automation and control system. Total protection of components (equipment/devices), systems, organizations, and networks from cyber attack threats requires multi-layered cyber risk mitigation measures, early detection of incidents, and appropriate response and recovery plans when incidents occur. For more information about cybersecurity, refer to the Pro-face HMI/IPC Cybersecurity Guide.

https://www.proface.com/en/download/manual/cybersecurity\_guide

### **AWARNING**

## POTENTIAL COMPROMISE OF SYSTEM AVAILABILITY, INTEGRITY, AND CONFIDENTIALITY

- Change default passwords at first use to help prevent unauthorized access to device settings, controls and information.
- Disable unused ports/services and default accounts, where possible, to minimize pathways for malicious attacks.
- Place networked devices behind multiple layers of cyber defenses (such as firewalls, network segmentation, and network intrusion detection and protection).
- Apply the latest updates and hotfixes to your Operating System and software.
- Use cybersecurity best practices (for example: least privilege, separation of duties) to help prevent unauthorized exposure, loss, modification of data and logs, interruption of services, or unintended operation.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

	3-2	Software Compatibility		

**Other Important Notes on Software** 

## 1. Summary

On replacement from GP-3300T/S/L (DIO) to STC-6300TA, the following points are the main points to note.

- STC-6300TA is equipped with DIO as standard, same as GP-3300T/S/L (DIO). Since the I/O driver used are different between GP-3300T/S/L (DIO) and STC-6300TA, the I/O driver settings in GP-Pro EX will not be carried over to STC-6300TA after converting the project. You need to configure the I/O driver settings on the software again.
- The DIO specifications of GP-3300T/S/L(DIO) and STC-6300TA are different. Please note that rewiring is required. For the details, please refer to STC6000 Hardware Manual.
- Display resolution: STC-6300TA has a better resolution. You need to convert resolution by the software to use old project data from GP-3300T/S/L.

GP-3300T/S/L

320 x 240 pixels (QVGA)

STC-6300TA

640 x 480 pixels (VGA)

 External dimensions: The panel cut dimensions are the same, but the external dimensions are slightly different. It is necessary to check the dimensions of the HMI installation location.

GP-3300T/S/L

W167.5 x H135 x D59.5 mm

STC-6300TA

W169.5 x H137 x D60 mm

# 2-3. Interface Compatibility

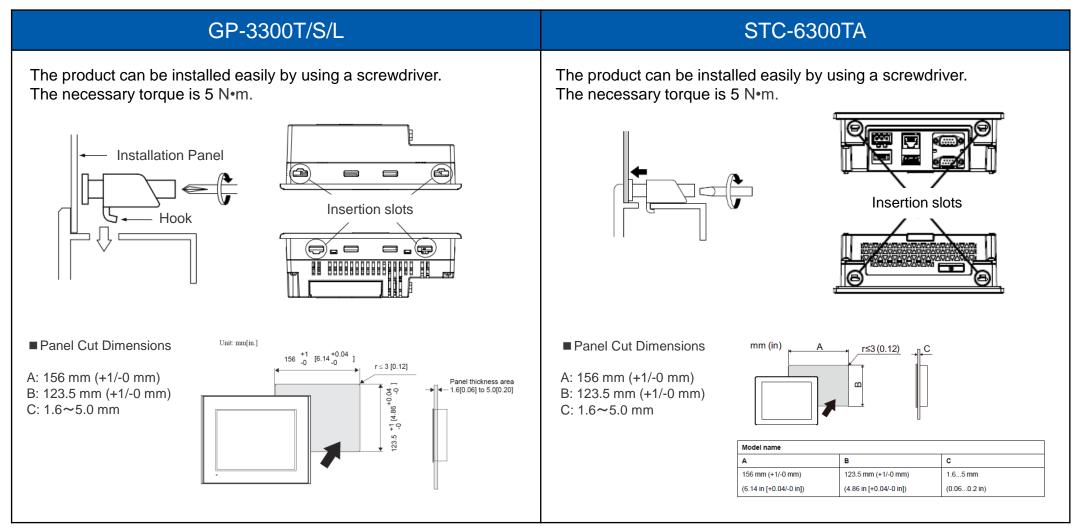

STC-6300TA Bottom

NOTE: Please be careful when replacing, as the wiring will change significantly. Please check <u>STC6000 Series Hardware Manual</u> for details such as interface specifications and pin assignments

<sup>\*1:</sup> CANopen communication is not available.

# 2-4. Installation Method Compatibility

Panel cut dimensions and installation method are the same between GP-3300T/S/L and STC-6300TA.

**NOTE**: Installation fastener of GP-3300 (P/N: CA3-ATFALL-01) cannot be used for STC-6300TA. For STC-6300TA, please use the fastener of STC6000 Series (P/N: PFXZC3AT1). Please check <a href="STC6000 Hardware Manual">STC6000 Hardware Manual</a> for installation requirements and procedure.

# 2-5. Option compatibility – Serial Interface

Product Name	GP-3300T/S/L	STC-6300TA	Description	Compatibility

Battery for Data Backup	-	PFXZGEBT1	Primary battery for memory and time data backup (1 piece)	NEW
Panel Cutout Adapter	CA4-ATM5-01	-	Panel cutout adapter for mounting GP-3300 series in cutout of GP-37W2B	-
DIO Connector	CA6-DIOCNALL-01	-	Connectors for interfacing with outernal I/O devices (E nicess/act)	NEW
DIO Connector	-	PFXZC7CNXY321	Connectors for interfacing with external I/O devices (5 pieces/set).	Use the option for STC6000 series.
TM3 Module Securing Hook	-	PFXZHMSH1	TM3 module securing hook (1 piece)	NEW

# 2-6. Other Important Notes on Hardware

#### About Serial Interface

- The Serial Interface specifications (such as pin assignment and the shape of plug/socket) of STC-6300TA are different from GP-3300T/S/L. For the details, refer to <a href="STC6000 Hardware Manual">STC6000 Hardware Manual</a>.
- The RS-232C/422/485 device that was connected via COM1 on GP-3300T/S/L will be connected via COM1 on STC-6300TA. (The same cable connection can be used.)
- The RS-422/485 device that was connected via COM2 on GP-3300T/S/L will be connected via COM1 on STC-6300TA.
  (The same cable connection can be used, but conversion cable is required.)
  Before STC-6300TA is connected, be sure to change the port setting to "COM1" in "Device/PLC Settings" on GP-Pro EX.
  Also, please check the communication settings again with "GP-Pro-EX Device/PLC Connection Manual" just in case.
- If you have configured GP-3300T/S/L to connect both COM1 and COM2 to connected devices, you will only be able to
  connect them via COM1 when replacing to STC-6300TA. In this case, change either COM1 or COM2 to other communication
  method.
- By using "USB/RS-422/485 Conversion Adapter", you can use the USB interface of STC-6300TA as RS-422/485 Serial Interface. For the details, refer to "<u>USB/RS-422/485 Conversion Adapter Installation Guide</u>".
   As the connectable devices with USB/RS-422/485 Adapter are limited, please also refer to "<u>USB/RS-422/485 Conversion Adapter Connection Guide</u>" to see the list of supported drivers.

## 2-6. Other Important Notes on Hardware

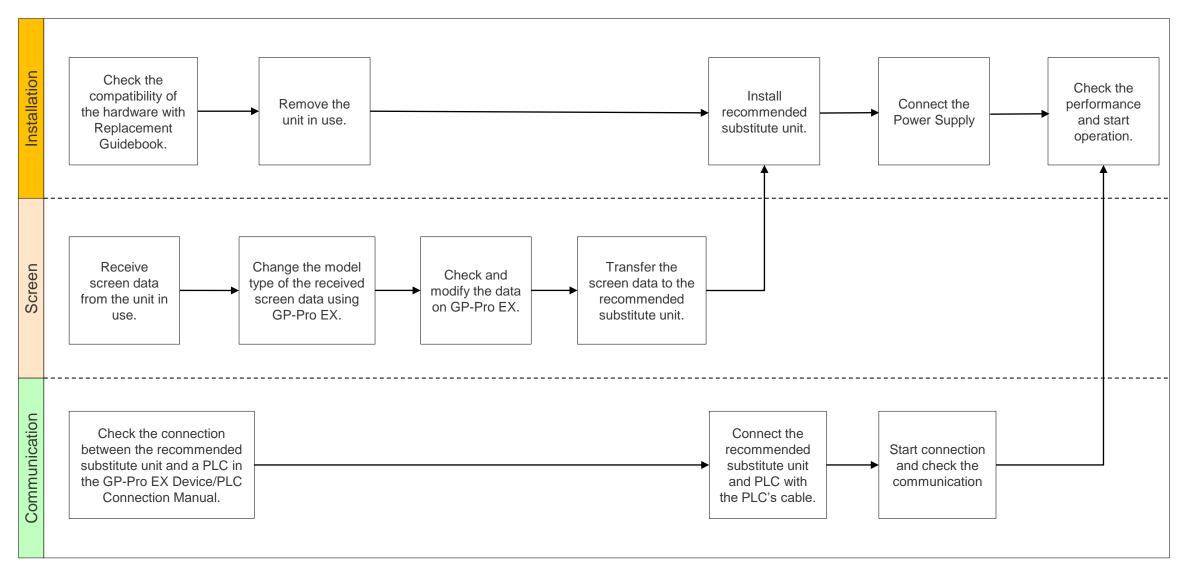

- Do not expose the hardware to direct sunlight. Recommend to use the option item "UV Protection Sheet" to protect the display from ultraviolet light.
- This product is not designed for outdoor use. UL certification obtained is for indoor use only.
- Do not turn on the hardware if condensation has occurred inside the device.
- The panel brightness may decrease when used for a long time in an environment continuously filled with inert gas.
   Please ventilate the control panel periodically.

# 3. Software Section

## 3-1. Replacement Procedure - Workflow

# 3-1. Replacement Procedure - Preparation

Requirements for receiving screen data from the unit in use *1	PC in which GP-Pro EX Transfer Tool is installed. *2
	Transfer Cable (the followings can be used) USB transfer cable: CA3-USBCB-01 (Type A - Type A) *It's also possible to send/receive a screen via CF Card, USB storage device or Ethernet.
Requirements for converting screen data of the unit in use and transferring the converted data to Recommended	PC with GP-Pro EX installed STC-6300TA supported version: Ver. 4.09.500 or later
substitute unit	Transfer Cable (the followings can be used) USB transfer cable: PFXZUSCBMB2 (Type A – Type micro-B) or commercially available USB micro-B transfer cable *It's also possible to send/receive a screen via USB storage device or Ethernet.

<sup>\*1:</sup> This step is required if screen data is saved only in the HMI unit, not in any other device.

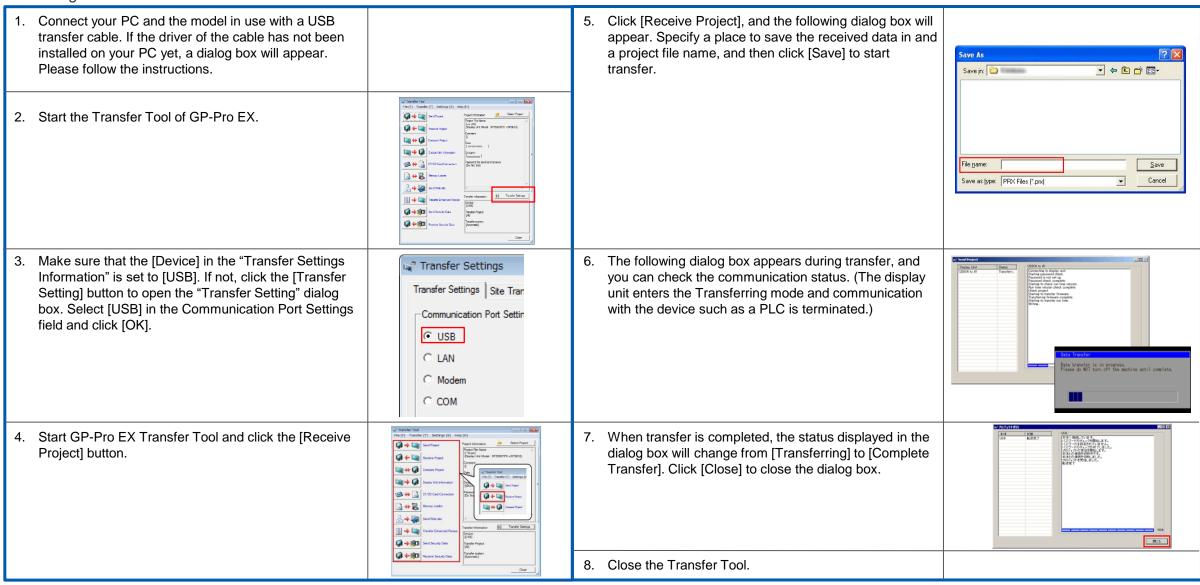

If you already have the screen data backup, please go to "3-1. Replacement Procedure – Change model to recommended substitute unit (GP-Pro EX)".

<sup>\*2:</sup> Please use the same or later version of the software used when creating screens on the old model. If you don't know the software version, we recommend that you use the latest one. You can download the latest transfer tool from our website.

https://www.pro-face.com/otasuke/

## 3-1. Replacement Procedure – Receive Screen data from the model in use (GP-Pro EX)

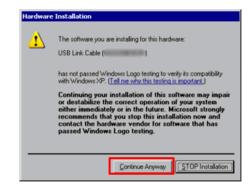

In this section, we will introduce how to receive screen data with a USB transfer cable as an example. If you have the backup of screen data, this step is not necessary. Please go to the next section.

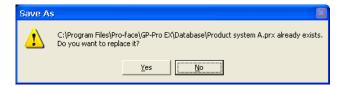

## 3-1. Replacement Procedure – Receive Screen data from the model in use (GP-Pro EX)

#### **NOTES**

• The "Hardware Installation" dialog box as shown on the right may appear during installing the USB driver depending on the security level of Windows®. Click [Continue Anyway] to start installing the driver. When installation is completed, click [Finish].

When the file already exists, a window will appear asking if you want to overwrite the file.

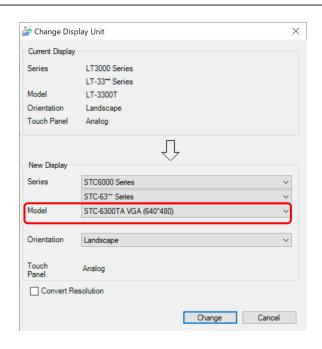

When receiving a project file that uses SD card/USB memory data such as Recipe Function (CSV data), the following dialog box will appear during the transfer. Please specify where to save the data.
 Click [OK] to return to the [Receive Project] dialog box and complete the transfer.

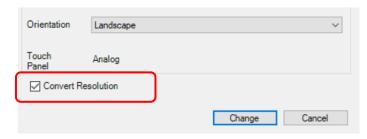

## 3-1. Replacement Procedure – Change model to recommended substitute unit (GP-Pro EX)

Change the Display unit from GP-3300T/S/L to STC-6300TA.

The display can be changed from the menu bar "Project" → "System Settings" → "Display" → "Change Display" in GP-Pro EX.

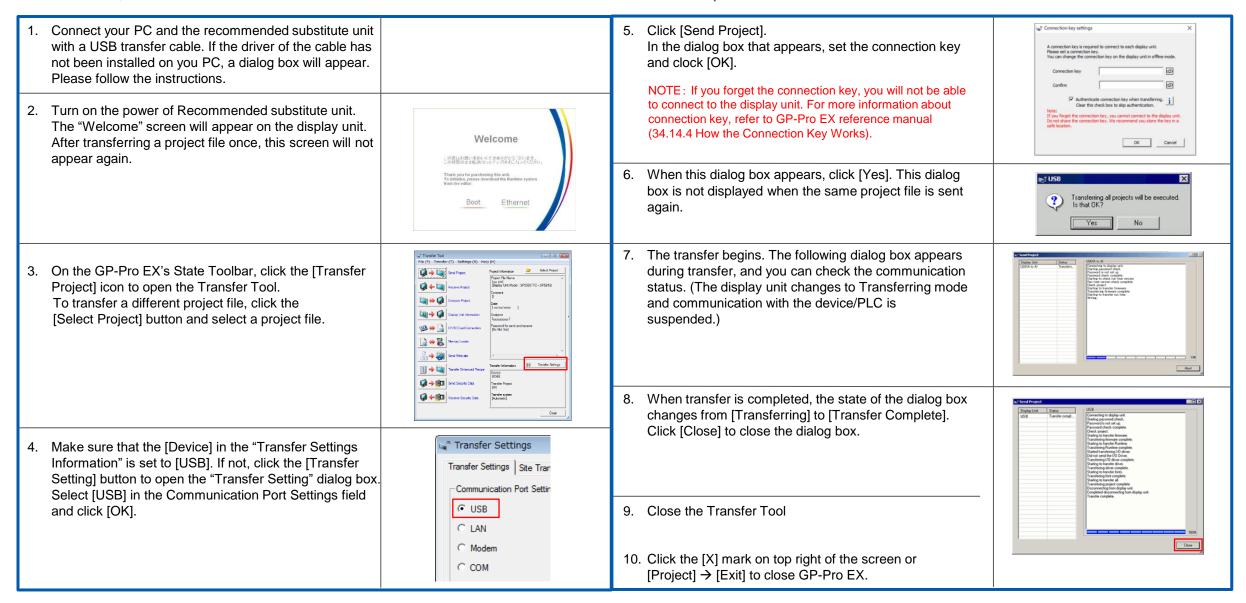

If you check on [Convert Resolution] when changing the Display Unit type (as shown below), you can adjust both size and location of the part and the text relative to the display resolution automatically. But still, you may need to adjust them manually. Please pay attention to the following points.

- A function that requires absolute coordinates. Please adjust the settings manually.
  - Global window
  - Position Animation
- · Due to font size and resolution restrictions, manual changes may be required. Please resize them if needed
  - Font: In the case of using Standard font, the size will be smaller. You can improve by using Stroke font or Image font.
  - Objects
  - Parts
  - Images
  - Alarm parts
- Position may differ from the original project. Please check the coordinate of the window and adjust if needed.
  - Window display

## 3-1. Replacement Procedure – Transfer screen data to recommended substitute unit (GP-Pro EX)

In this section, we will introduce how to transfer screen data with a USB transfer cable as an example.

<sup>\*1</sup> To use Pro-Server EX on STC-6300TA, GP-Pro EX Ver.4.09.550 or later is required.

- About I/O driver settings
  - STC-6300TA is equipped with DIO as standard, same as GP-3300T/S/L(DIO). Since the I/O drivers used are different, the I/O driver settings set in the GP-3300T/S/L(DIO) project will not be carried over to the STC-6300TA after conversion. If I/O assignments have been made in a GP-3300T/S/L (DIO) project, changing the model to STC-6300TA will clear all the I/O assignments, so please make the settings again.

Setting location: GP-Pro EX [Project]→[System Settings]→[I/O Driver Settings] →[I/O Screen]

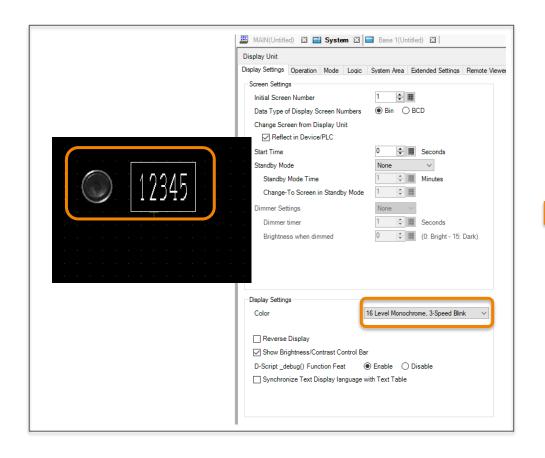

#### GP-3300T/S/L (DIO) Project

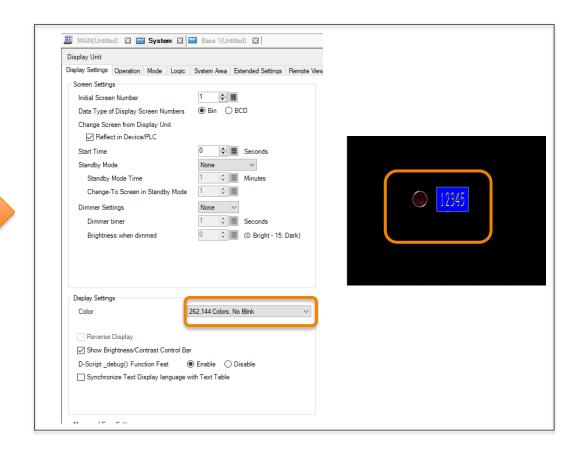

- About Display colors (GP-3300L only)
  - The display color of GP-3300L is monochrome. As STC6000 Series do not support monochrome display, if you change the model to STC6000 Series, the display color will be changed to Color display. Therefore, after changing the model, be sure to check the color of the screen data with GP-Pro EX.

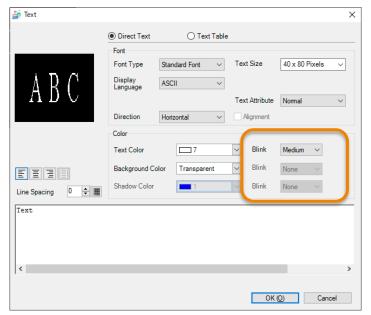

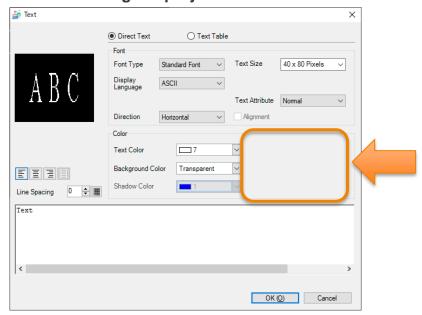

#### About Blink function

 STC6000 Series do not support Blink function. Therefore, if you use the blink settings in GP3000 Series, the settings will be cancelled after changing the display to STC6000 Series in GP-Pro EX.

#### **GP3000 Series**

#### After converting the project to STC6000 Series

Pro-face<sup>™</sup>

by Schneider Electric

**NOTE:** We have a workaround to add blink functions to some of the parts/texts on STC6000 display by using the functions of the configuration software, GP-Pro EX. Refer to the following FAQ for the setting procedures.

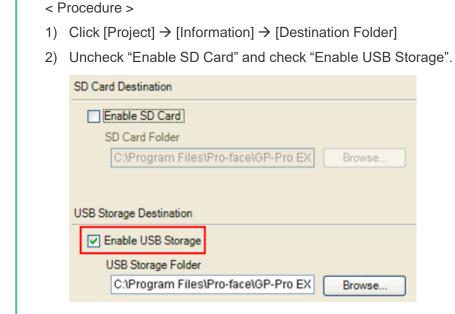

https:/www.proface.com/en/support/faq/FAQ000268649

- Changing the setting of the external media to use
  - If a CF card is used for GP-3300 series, after the display unit type of the project file is changed to STC6000 series, "a CF card" is automatically replaced with "a SD card" for the external media setting. However, STC-6300TA does not support SD card.

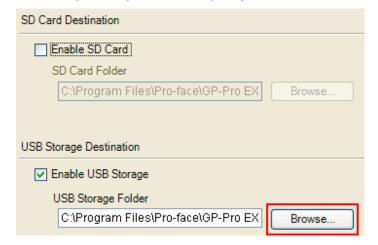

After conversion of the project file data, at GP-Pro EX Error Check, if the message, "The project contains features that require a SD card. However, the selected display does not support SD cards so these features will not run." appears, change the SD card setting to the USB storage setting

following the procedure below.

3) Click the [Browse] button and specify a destination folder.

- 4) Click [OK] to confirm the setting.
- 5) Click [Project]->[Save] to save changes.
- 6) Check each function that uses the CF Card and replace the setting with [USB Storage].
