

Event Recording with Factory Drive Recorder

Designed for End users in Production, Maintenance and Process Management.

COMMON ISSUES

Frequent alarms

- Hard to identify the cause.

Remote monitoring needed

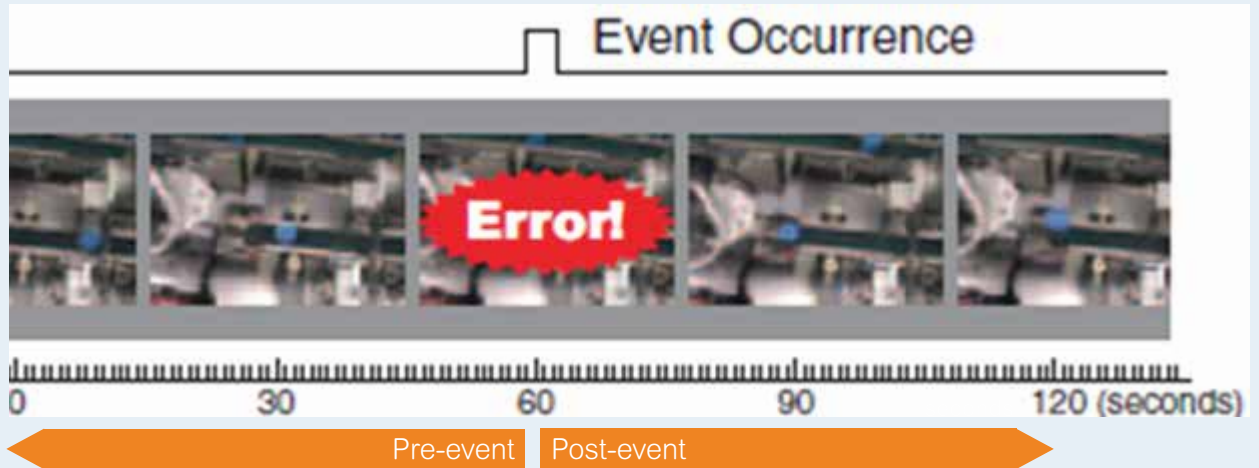

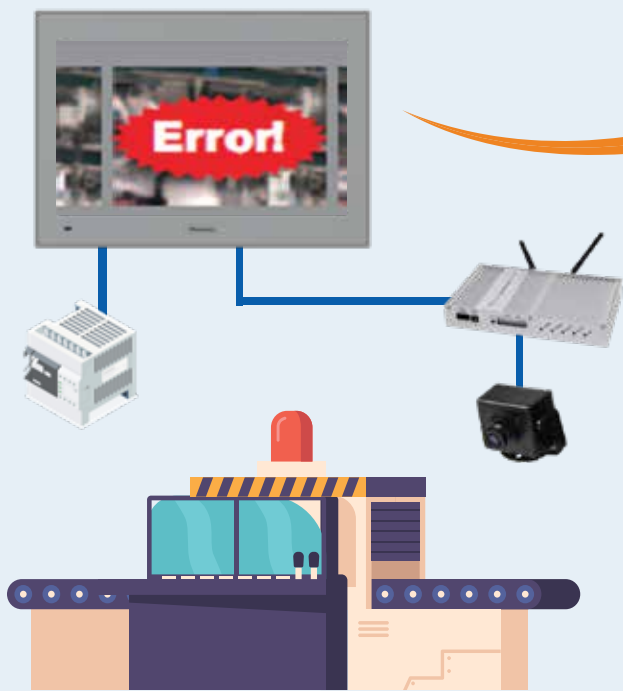

- Visiting the site is not always possible.

Operator tracking

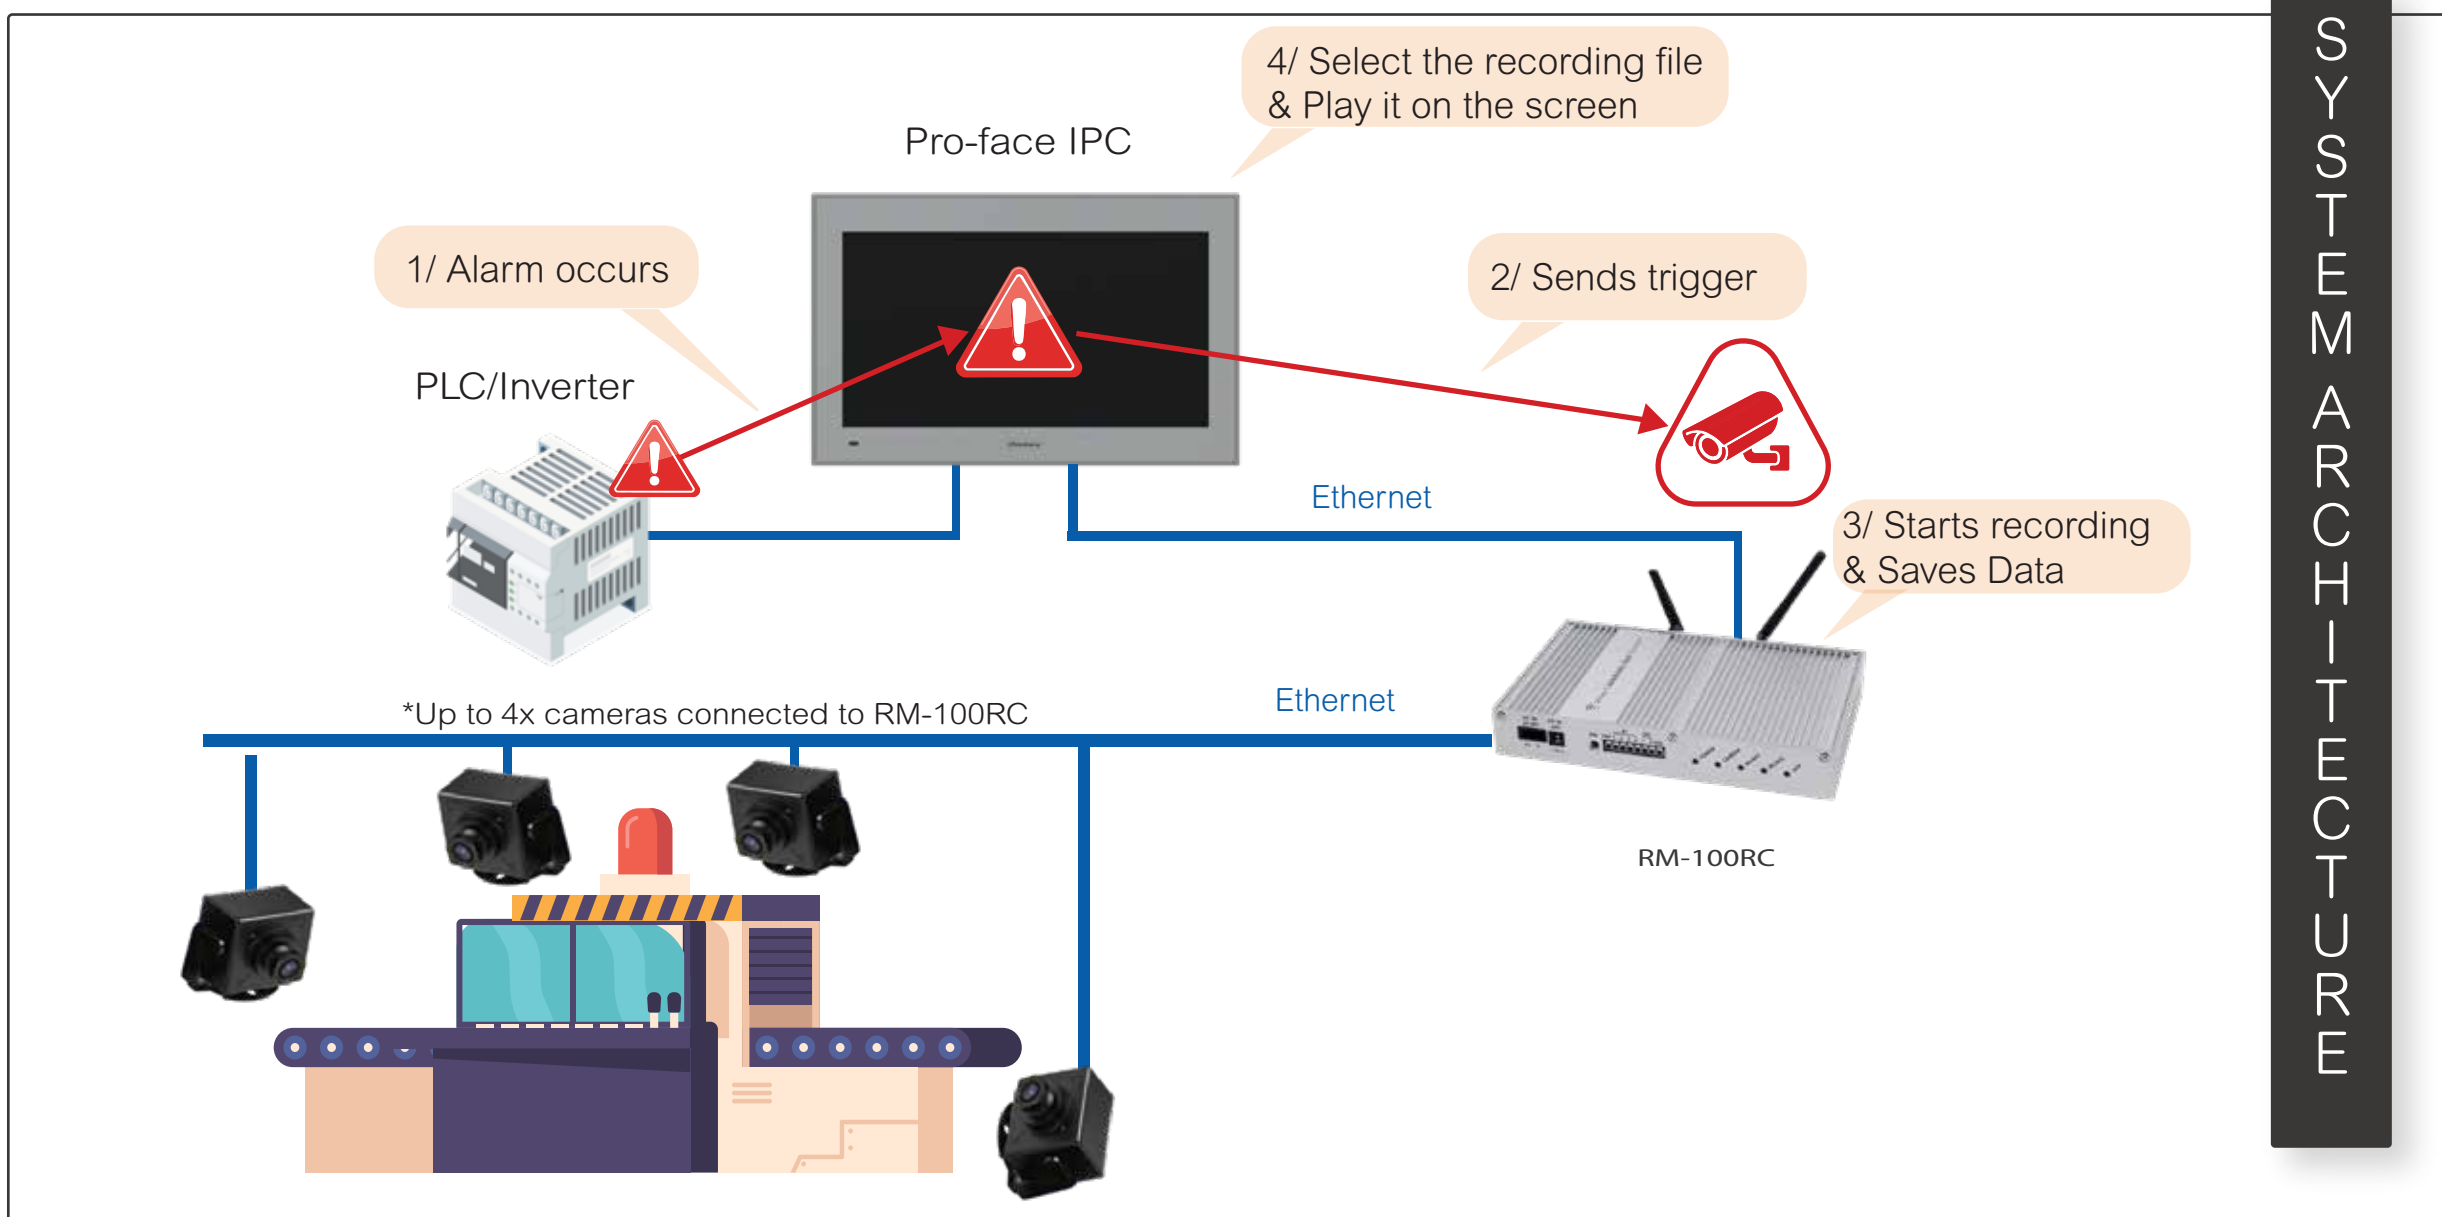

- Useful for better management.

OUR SOLUTION

At the point of event occurrence, video is recorded and saved for a maximum of 120 seconds before and after the event.

- When an alarm occurs, the machine's status before and after is recorded as a video on the Pro-face IPC.
- Each event generates a video linked to the alarm history for easy review and cause analysis.
- Operator actions and operation screens are captured during key operations, allowing detailed checks by combining video with operation logs.
